

Amazonian Azabache

Properties, characteristics and curiosities

The Amazonian Azabache is fossilized charred wood of vegetable origin, it is a variety of lignite of very fine grain, of velvety black color and its crust is soft, it has opaque gloss and very low specific gravity.

One of its fundamental characteristics is that when scratching an azabache on a white surface, it leaves a brown line.

Since ancient times it has been considered a powerful protector both in the rough and in jewelry, so it has been found in Egyptian, Etruscan, Roman and Viking jewelry.

The closed fist, in some cultures, represents an amulet, symbol of good luck and protector against envy and evil eye.

Peony

Meaning and properties

The most common meanings of peonies include: Romance, prosperity, good luck, a happy marriage, riches, honor and compassion.

The peony is a red and black seed that leaves the pod of the Abrus Precatorius, is usually used as protection against envy, jealousy, negative energies and the evil eye, so it is placed with a red ribbon next to a little azabache fist in babies and small children, is also usually carried along with money, or as pendent in necklaces, bracelets, tendrils or anklets to attract good fortune.

It is advisable to clean it before using it, it is usually rubbed with a drop of olive oil, making sure that no one else touches it.

It is said that where the peony seed was, evil spirits don't enter.
